We may have to do some vial filling of lorazepam in 2ml vials for AMD for about a month till they get up to speed and buy the equipment to fill + crimp these products that we do not make , can't make….etc….
They will pool the commercial lorazepam in a bag and we will fill 500-1000 2ml vials, stopper + crimp. We will then send back to AMD and they will label them. There will be no paperwork involved since I want no trace of this process. We actually cut the original glove-box out of our old CR on front of building . AMD is going to give it a tune-up and use for open vessel filling.
